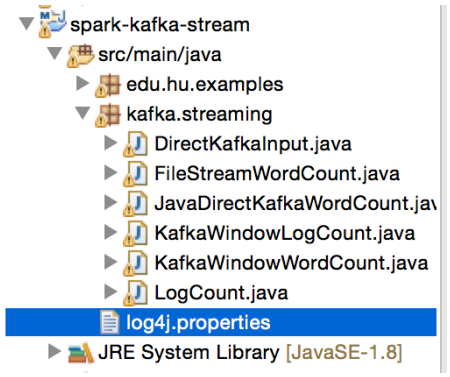
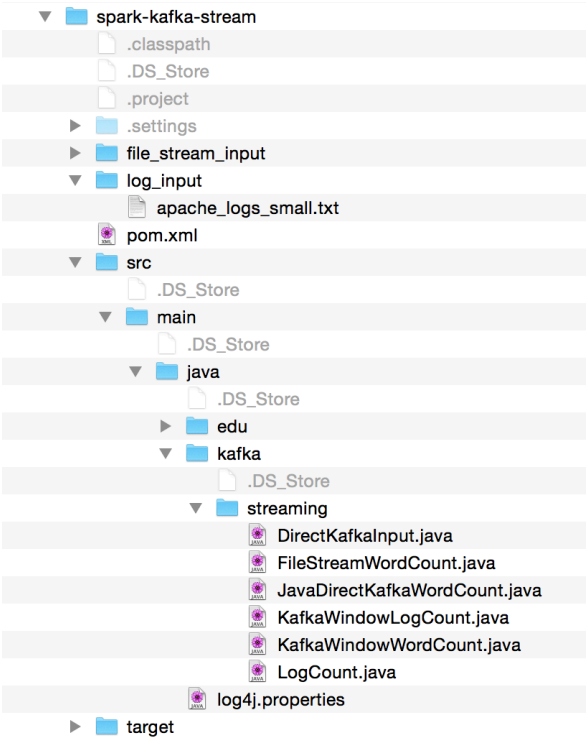
P4 Spark Kafka local (Eclipse) setup

Create a regular Maven project folder structure , with pom.xml
Add log4j.properties to your src/main/java dir (if you want to control logging levels) :



An example of my project "spark-kafka-stream" structure:

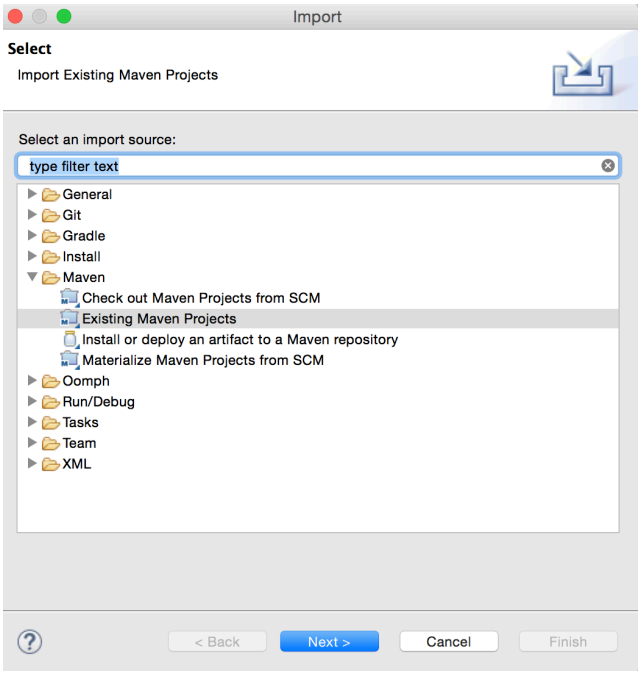


Most important pom.xml settings:

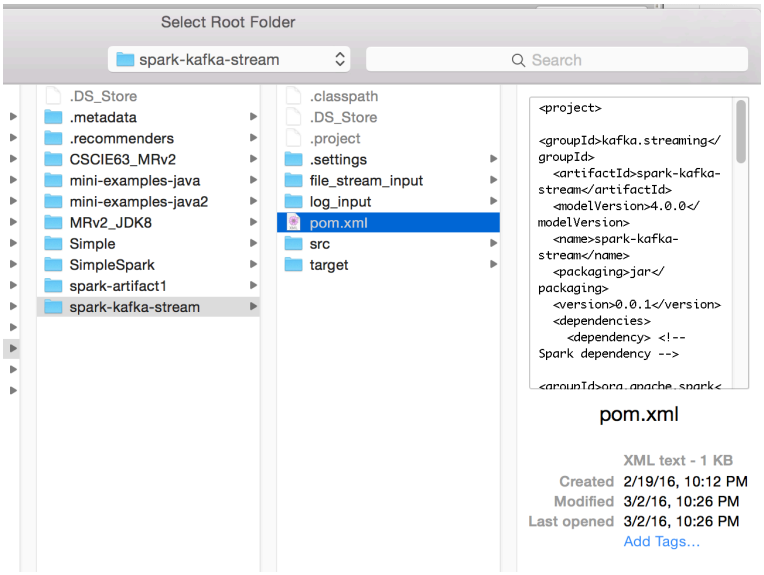
```
<dependencies>
   <dependency> <!-- Spark dependency -->
     <groupId>org.apache.spark</groupId>
```

```
    <artifactId>spark-core_2.10</artifactId>
    <version>1.6.0</version>
    <scope>provided</scope>
  </dependency>
  <dependency>
      <groupId>org.apache.spark</groupId>
      <artifactId>spark-streaming_2.10</artifactId>
      <version>1.6.0</version>
      <scope>provided</scope>
  </dependency>
  <dependency>
      <groupId>org.apache.spark</groupId>
      <artifactId>spark-streaming-kafka_2.10</artifactId>
      <version>1.6.0</version>
  </dependency>
</dependencies>
<properties>
  <java.version>1.8</java.version>
</properties>
```

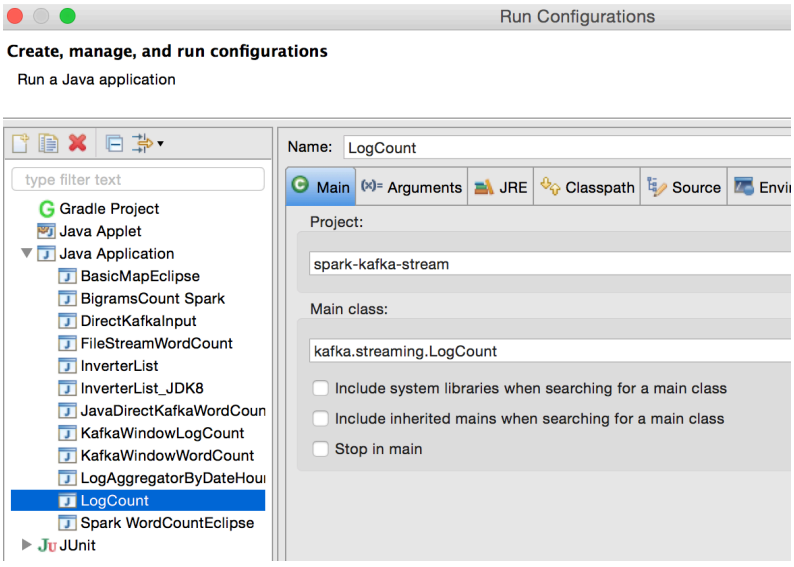
Create a new Java Maven project in Eclipse by doing "File --> Import... --> Maven -> Existing Maven project ..."



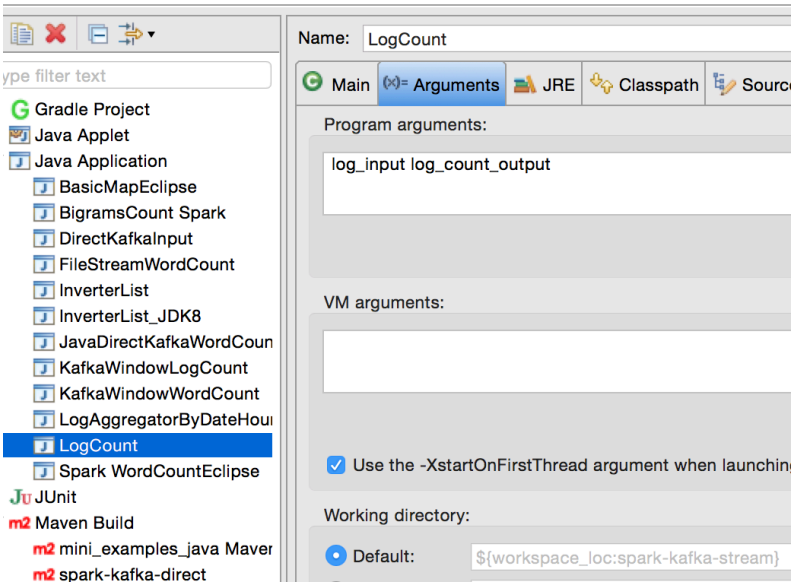
Navigate to your project's directory:



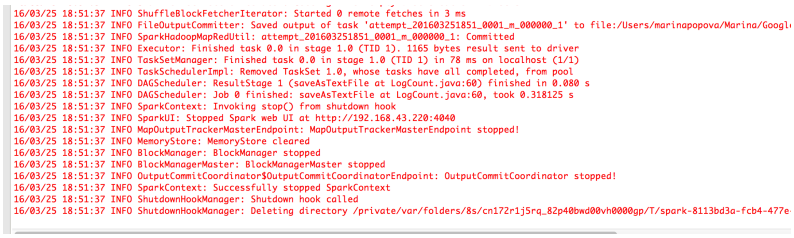
First, lets try to run a simple Spark streaming class that reads Apache logs from a file, and aggregates logs by their client Ips.
We will use the same Regex pattern that you used in the Hive data import - to parse the standard Apache log format.
Class: LogCount.java
To run - create a new Run Configuration:



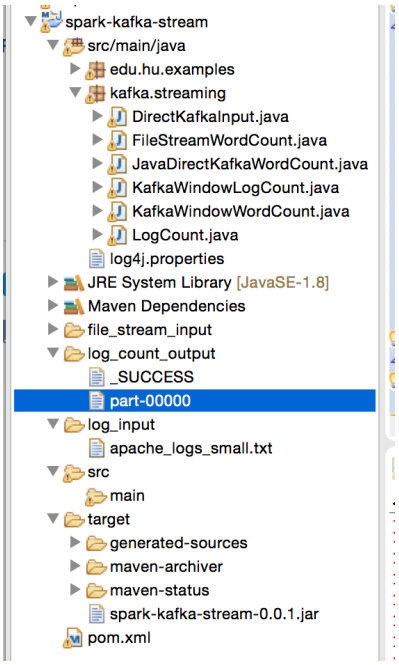
Set input parameters - input apache logs dir and output dir for the results (make sure it does NOT exist):



Run:

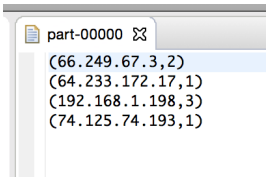


Results are in the specified dir:



We used apache_logs_small.txt as input:

Results of the LogCount:



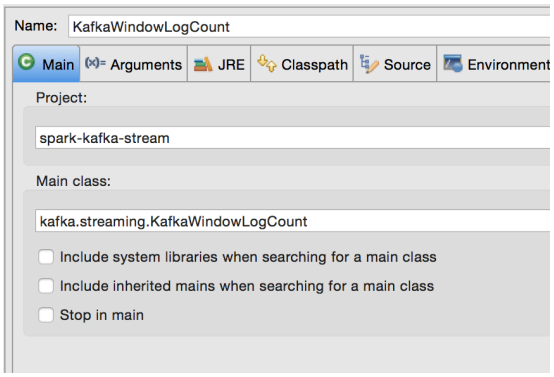
As you can see - the counts are correct!

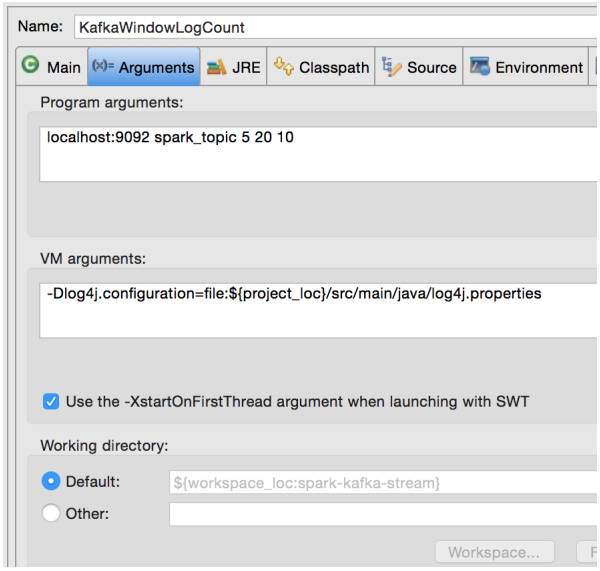
Now we can finally run the Spark streaming app that reads logs from Kafka and aggregates them over specified windows by clientIPs:

Java class: KafkaWindowLogCount.java

First, make sure your Kafka (and Zookeeper) are running.

Create a Run Configuration for the KafkaWindowLogCount:

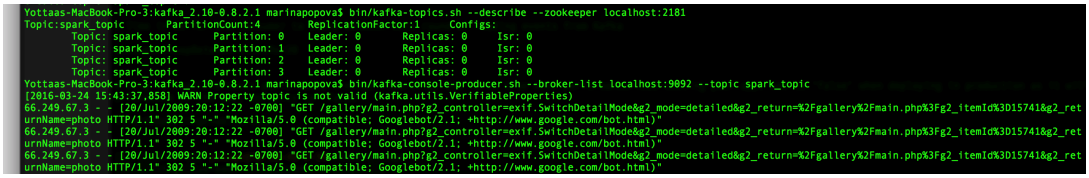




Run the application

We will test with two methods of sending logs to Kafka:

1. Using kafka-console-producer - send a few logs manually (same IP):



```
Yottaas-MacBook-Pro-3:kafka_2.10-0.8.2.1 marinapopova$ bin/kafka-topics.sh --describe --zookeeper localhost:2181

        Topic: spark_topic      Partition: 1    Leader: 0       Replicas: 0     Isr: 0
        Topic: spark_topic      Partition: 2    Leader: 0       Replicas: 0     Isr: 0
        Topic: spark_topic      Partition: 3    Leader: 0       Replicas: 0     Isr: 0
Yottaas-MacBook-Pro-3:kafka_2.10-0.8.2.1 marinapopova$ bin/kafka-console-producer.sh --broker-list localhost:9092 --topic spark_topic

Notice correct aggregated count by IP in Spark console output: (in Eclipse):

2. Run the apache log python producer - twice, to get more messages
